

HI GUYS!!!

Hi, This is Ultimate scripting book v1  
exclusively made by

@HackerAsura

@Hackerboss4444

With this book you can make a basic  
script for game guardian

TABLE OF CONTENTS:-

1]What is a Game Guardian?

2]What is Game cheating?

3]What is the difference between Manual  
script and automatic script?

4]How can I make a Script?

5]What do I need to make a Script?

1)What is a Game Guardian?

A) Gameguardian is a tool or application  
to hack money,HP,SP of any game(SOME  
ONLINE GAMES CANNOT BE HACKED)

2)What is game cheating?

A) Changing anything in game to get  
advantage or to go out of limitation made  
by developer is called game cheating.

3)What is the Difference between Manual  
script and automatic script?

A) Manual script is a method to hack a  
game in which you have to search the

value of a game and edit it manually.  
But whereas in Automatic script all game values are set already. Just you need to click on desired hack option. Everything hacks in seconds!

4) what do I need to make a script?

A) To make a script, You need a LUA editor.  
I prefer QLUA APP

Then you need Parallel Space. (If you use ROOT, Ignore)

After that, you need Game guardian  
all links are shown at below page.

5) How to make a script?

A) Making a script is easier than you think.

Just you should remember some gg codes. You can keep a file of any script and edit it.

First of All, if You need to show a Menu showing **COINS HACK, SPEEDHACK, EXIT.**

Then you have to type the below code  
**menu=gg.choice({"Coins Hack", "SPEED HACK", "EXIT"})**

The above Code will show a menu of coins hack, speed hack, exit. But if you tap on any option, You see that that the Script ends.

We need to make our script respond ,  
follow the below code

```
if menu==1 then  
gg.searchNumber("500",gg.  
TYPE_DWORD)
```

The Above will search for the value 500  
dword in the game. Here 500 is the present  
amount of coins in your game. For  
example: If you have 1234 coins in your  
game, You need to type 1234 in place of  
500.

Now We need to edit the coins to 99999  
So, type the below code:

```
gg.getResult(100)  
gg.editAll("99999",gg.TYPE_DWORD)  
end
```

The about code will gather the first 100  
values

and Edit them to 99999. Hence, Hacked.

Now coming to speed hack.

Type the below code to activate speed  
hack:

```
if menu==2 then  
gg.setSpeed(5)  
end
```

Now suppose, we need to exit from script:

```
if menu==3 then  
os.exit()  
end
```

Now our script is ready:

Our final Script look like:

```
menu=gg.choice({"Coins hack","SPEED  
HACK","EXIT"})  
if menu==1 then  
gg.searchNumber('500',gg.TYPE_DWORD)  
gg.getResults(100)  
gg.editAll('99999',gg.TYPE_DWORD)  
end  
if menu==2 then  
gg.setSpeed(5)  
end  
if menu==3 then  
os.exit()  
end
```

Thank You for using this book.

New ultimate scripting book V2 is

coming soon in which you can

learn many gg codes like adding

password to script,adding expiration

date etc.
